

CENTRIC BPM

SHIFTING TO
A MODERN ENTERPRISE
DIGITAL PLATFORM

Centric BPM solution is a data and process driven agile ecosystem that covers complex business cases. It is based on evolving open standards and uses a modern web approach on the enterprise architecture. Centric BPM streamlines activities to reduce costs and improve business agility.

Centric BPM ESB

Workflow Engine
This component provides the graphic framework of business processes and the execution of workflows, aligned with the business analysis.

Web Portal
Available for both internal and external users. It provides the user interfaces and ensures a logic workflow.

This component equates with an Enterprise BUS and provides unitary integration between all components of the application. Messages are transferred between all system components consistently providing at the same time unified access rights between all of the above mentioned.

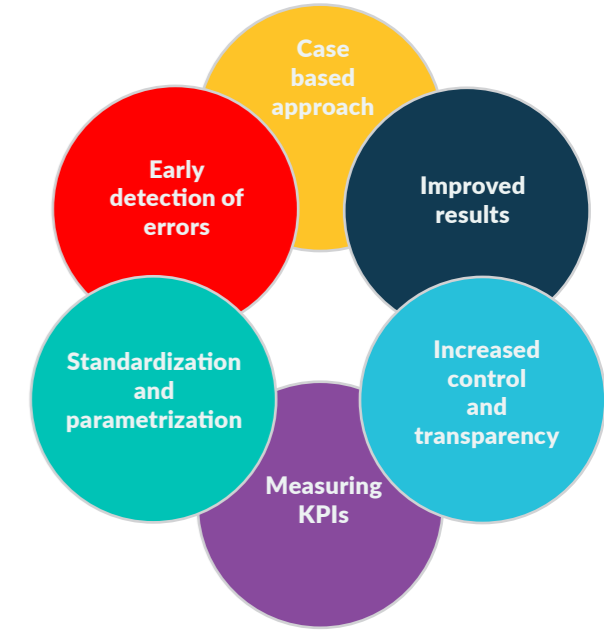

- Over 120 BPM and EPM projects implemented
- Instant reduction of operational cost
- Enhanced work capacity
- Optimised speed and quality of business processes

Our solutions are value-oriented and process-driven, based on modern BPM principles.

WHAT IS BPM?

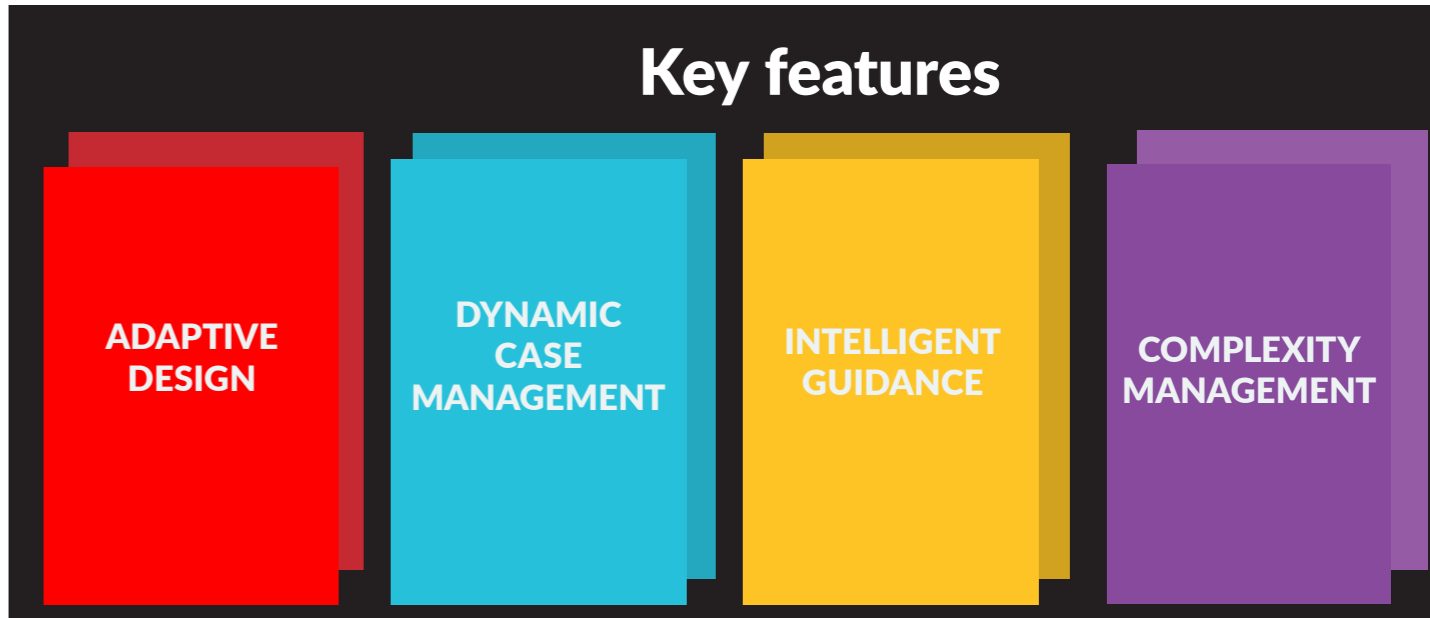

- Business Process Management
- Integrated management system that transforms business processes in order to better meet customer needs
- Continuous processes improvement through innovation, flexibility increase and new technology

“BPM TECHNOLOGY IS A STRATEGIC ENABLER OF THE CXO MISSION”

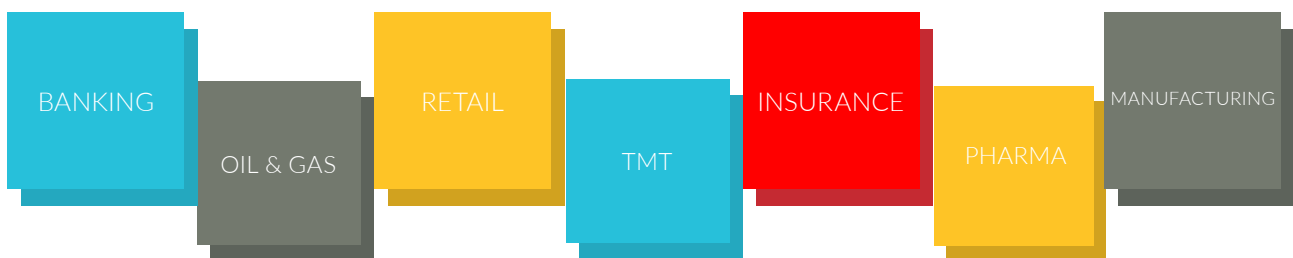

- BI Engine** This component provides integration services related to reporting and integrated data analysis.
- Application Server** provides running application services with a Java virtual machine.
- DMS Engine** provides Document Management services such as: storing documents, defining metadata, searching and versioning documents, accessing rights and synchronizing documents functionalities.
- Web Server** provides HTML pages delivery services via user browser.

- System** is a main system component which provides the entire operating logic for the System. The Management System module involves integrations with additional applications.
- Integration Engine** provides integration services with external applications through a dedicated system comprising of numerous predefined connectors.
